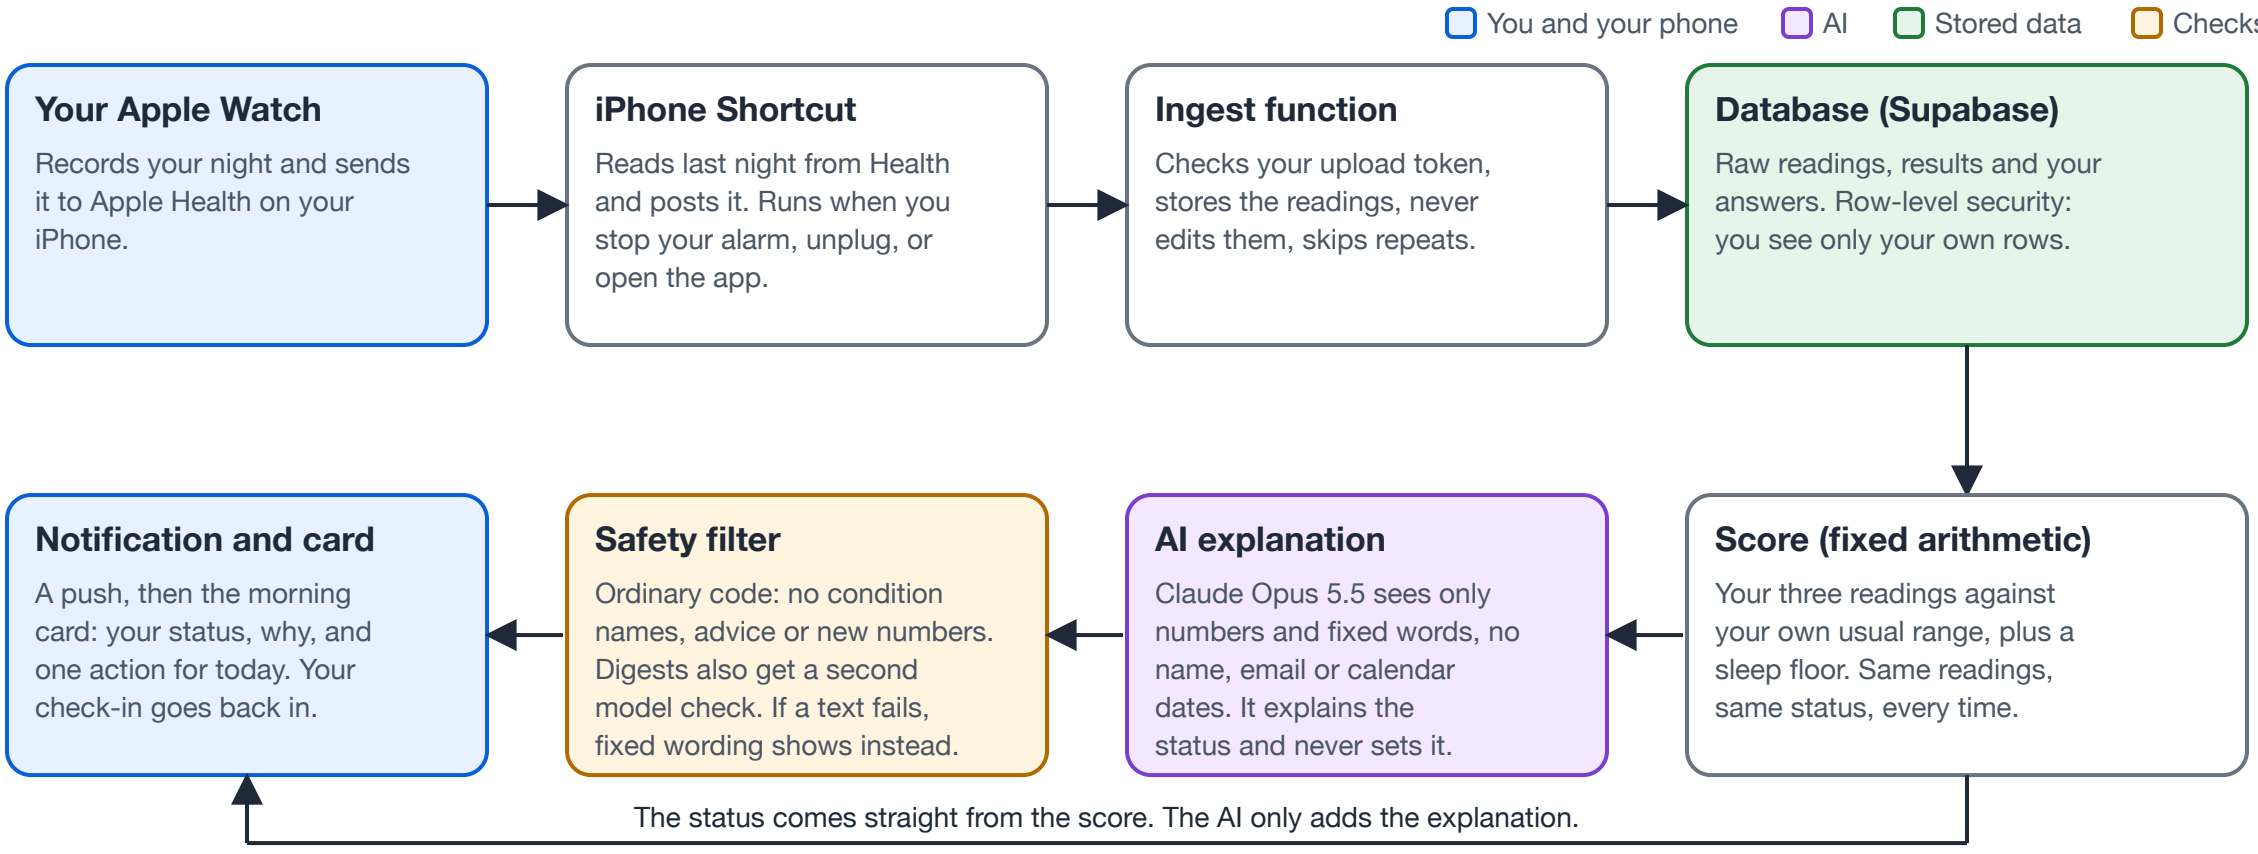
How Clarivi turns your Apple Watch night into a morning answer



How quality is checked

Reference check
A pandas notebook recalculates your whole year on its own, and the database must agree, value for value.

Tests
Database tests prove nobody can read another person's rows, and an outside-in privacy check and screen tests run too.

AI test set
Invented cases written before any code, plus a sealed set. Every miss is reported next to its target.
